LIST OF FIGURES	xix
1. INTRODUCTION	1
2. BACKGROUND	1
2.1 Geography	1
2.2 Population	2
2.3 Health Status	4
3. METHODS	5
4. REPORT SUMMARY	8
4.1 Overall Cancer Incidence And Burden	8
4.2 Variation In Cancer Incidence By Sex ,Age And Ethnicity	8
4.3 Selected Cancer Sites	8
4.3.1. Female Breast Cancer	9
4.3.2. Colorectal Cancer	9
4.3.3. Lung Cancer	9
4.3.4. Cervical Cancer	9
4.3.5. Nasopharyngeal Cancer	9
4.3.6. Liver Cancer	10
4.3.7. Prostate Cancer	10
5. CANCER INCIDENCE IN PENINSULAR MALAYSIA 2006	11
5.1 Overall cancer incidence	11
5.2 Cancer incidence by site	13
5.2.1. Sex differences in cancer incidence by site	13
5.2.2. Ethnic variation in cancer incidence by site	21
5.2.3. Age variation in cancer incidence by site	35
6. SELECTED CANCER SITES	46
6.1 Tongue	46
6.2 Salivary Gland	48
6.3 Mouth	50
6.4 Nasopharynx	52
6.5 Oesophagus	54
6.6 Stomach	56
6.7 Colorectal	58
6.8 Liver	60
6.9 Gallbladder	62
6.10 Pancreas	64
6.11 Nose And Sinuses	66

6.12	Larynx	68
6.13	Lung	70
6.14	Bone	72
6.15	Other Skin	74
6.16	Melanoma	76
6.17	Female Breast	78
6.18	Cervix Uteri	80
6.19	Corpus Uteri	82
6.20	Ovary	84
6.21	Prostate	86
6.22	Bladder	88
6.23	Kidney And Other Urinary Organs	90
6.24	Brain And Other Nervous System	92
6.25	Thyroid	94
6.26	Lymphoma	96
6.27	Leukaemia	98

APPENDICES		100
Appendix 1	New cases of cancer and percentage of total number of cases, by site, age and sex, Peninsular Malaysia 2006	100
Appendix 2	Age Specific Cancer Incidence per 100,000 population, Age standardized incidence and Cumulative risk, by site, age and sex, Peninsular Malaysia 2006	106
Appendix 3	The world standard population	112

ACKNOWLEDGEMENTS

The National Cancer Registry under the Public Health Department, Ministry of Health Malaysia, for this NCR 2006 report would like to extend its appreciation to all individuals, organizations that had directly and indirectly made the contribution, that made this NCR 2006 report possible.

We would like to thank especially the following:

1. The Honourable Minister of Health Malaysia, Y.B. Dato' Chua Soi Lek.
2. Director General of Health Malaysia, Tan Sri Dato' Seri Dr. Hj Mohd Ismail Bin Merican
3. Deputy Director General of Health Malaysia (Public Health) Dato' Dr. Hj Ramlee bin Rahmat.
4. Deputy Director General of Health Malaysia (Medical) Dato' Dr Noorimi bt Morad.
5. Director of Disease Control Division, Ministry of Health Malaysia, Dato' Dr. Hasan bin Abdul Rahman.
6. Deputy Director of the Information and Documentation System (IDS) Unit of MOH, and all medical record departments from all participating hospitals.
7. State Directors, State Epidemiologists and their staff from all the states involved for their continuous commitment and support.
8. Head of Department, Oncology Department, HKL, Dr. Gerard Lim Chin Chye for his continuous support.
9. Oncologists, pathologists, other discipline specialists, palliative care professionals, and all other members of the medical profession from various government, universities, non-governmental and private centres, upon whose commitment, hard work, and timely data submission, this report ultimately depended on.
10. Director of National Registration Department and NRD staff for their assistance and support.
11. MAKNA (National Cancer Council) Malaysia and their committed staff for their continuous support.
12. All other individuals and organizations, those who are not mention here, whom we deeply appreciate and humbly we would like to thank them, for without their continuous support and contributions, this report may not possible to be published.

STAFF OF THE NATIONAL CANCER REGISTRY (2006)

Cancer Registry Manager	Ms. Tom Asiah Mohd Ali
Data Coordinator	Ms. Yogespriya Sheeraman
Clinical Registry Associate	Ms. Nurul Huda Abdullah
Clinical Registry Associate	Ms. Nora Mohd Jelas
Clinical Registry Associate	Ms. Sharmila Saari

MALAYSIAN CANCER STATISTICS - DATA AND FIGURE PENINSULAR MALAYSIA 2006

1. INTRODUCTION

The data from this report will provide an epidemiological profile of cancer, cancer burden, and high risk group of specific Cancer in Malaysia which is an important in the Cancer Control Programme.

2. BACKGROUND

2.1. Geography

Malaysia covers an area of about 329,961 square kilometers, consisting of Peninsular Malaysia and East Malaysia (Sabah and Sarawak). It is separated by the South East China Sea and has its frontier with Thailand, Singapore, Indonesia and Brunei.

Peninsular Malaysia covers the area of 35,965 square kilometers and consists of the following states: Negeri Selangor Darul Ehsan, Negeri Perak Darul Ridzuan, Negeri Kedah Darul Aman, Negeri Kelantan Darul Naim, Negeri Perlis, Pulau Pinang, Negeri Terengganu Darul Iman, Negeri Pahang Darul Makmur, Negeri Johor Darul Takzim, Melaka, Negeri Sembilan Darul Khusus and Federal Territory (Kuala Lumpur and Putrajaya) which is the Capital of Malaysia.

Figure 1: Map of Malaysia

2.2. Population

The census population of Peninsular Malaysia in 2006 was **24,8 millions**. There were **50.6 % male and 49.4% female** and the major ethnic contribution was **54.3% Malay**, followed by Chinese 25.1%, Indian 7.5% and others 13.1% (Department of Statistic Malaysia).

3.0 METHODS

The report was prepared based based on the methodology set by The Cancer Registry Unit in CRC which was established to provide the functional capacity to support the operations of the NCR.

3.1. Objectives of NCR

The objectives of NCR was to ensure:

1. Complete enumeration of all incidence cases of cancer in the population
2. Validity of the data collected on these cases of cancer
3. Correct and reproducible classification and coding
4. Complete follow-up until migration out of the population or death.

3.2. Data management process

The objectives mentioned above were accomplished by data management process set by the above mentioned NCR . This includes :

- Data reporting by Source Data Providers;
- Data entry, review and updates
- Edit checks
- Data standardisation, review and coding
- Deduplication;
- Databased lock
- Analysis
- Data query, site monitoring, active case findings (performed in every steps)
- Report writing
- Printing and dissemination

3.3. Description of statistical methods

3.3.1. Crude Incidence Rate (CR)

The number of new cancer cases (incidence cases) observed in the population during the defined period, divided by the number of population at risk at the same period. It is usually expressed per 100,000.

The crude incidence rate (CR) is estimated as follows:

$$CR = \frac{\sum_{i=1}^A r_i}{\sum_{i=1}^A n_i} \times 100000$$

where r_i is the number of cases which have occurred in the i th age class and n_i the person-years of observation in the i th age class during the same period of times as cases were counted.

The population at risk refers to population of Peninsular Malaysia as provided by Department of Statistics based on its projection. The period of interest is one calendar year (year 2006)

3.3.2. Age-standardised incidence (ASR)

Crude Rates are not suitable for use in comparisons between different regions or periods hence, ASR is required for meaningful comparison of 2 populations that differ in their age structure. Since the incidence of cancer depends heavily on the age structure of the population, there is a need for age adjustments. Therefore standardisation is necessary when comparing several populations that differ with respect to age for it is a powerful influence on the risk of cancer. The age-standardised incidence rate is a summary measure of a rate that a population would have if it had a standard structure.

It is calculated by summing the products of the age-specific rates applied to the world standard population; the calculated incidence rate is then called the World Standardised Incidence Rate. It is also expressed in 100,000.

$$ASR = \frac{\sum_{i=1}^A a_i w_i}{\sum_{i=1}^A w_i}$$

where a_i is the age-specific rate in the i th age class and w_i is the weight from the Standard Population in the i th age class.

3.3.3. The Cumulative Risk (CumR)

The Cumulative Risk is the risk that an individual would have of developing the cancer in question during a certain age span if no other causes of death were in operation. This statistic is more readily understandable than age standardized rate as no arbitrary standard population is used. It can be considered as a directly age standardized rate with the same size of population in each age group. The CumR is estimated as follows:

The cumulative rate is estimated by the sum of over each year of the age-specific incidence, taken from birth to age 70+ for the 0-70+ rate.

$$\text{Cumulative rate} = \sum_{i=1}^A a_i t_i$$

where a_i is the age-specific incidence rate in the i th age class which is t_i years long.

The cumulative risk is estimated as follows:

$$\text{Cum. Risk} = 100 \times [1 - \exp(-\text{cum. Rate}/100)]$$

4. REPORT SUMMARY

4.1. OVERALL CANCER INCIDENCE AND BURDEN

A total of 21,773 cancer cases were diagnosed among Malaysians in Peninsular Malaysia in the year 2006 and registered in the National Cancer Registry. It comprises of 9,974 males and 11,799 females. The Age-standardised Incidence Rate (ASR) for all cancers in the year 2006 regardless of sex was 131.3 per 100,000. and the five most common cancer among population of Peninsular Malaysia in 2006 were breast, colorectal, lung, cervix and nasopharynx.

4.2. VARIATION IN CANCER INCIDENCE BY SEX ,AGE AND ETHNICITY

The ASR among males in Peninsular Malaysia was 128.6 per 100,000 population and among females was 135.7 per 100,000 population. Cancer seems to be predominant among Chinese as compared to Malay and Indian. The ASR for Chinese male was 148.0 per 100,000 and for Chinese female was 151.5 per 100,000 while for Malay males it was 94.5 per 100,000 and Malay female was 96.4 per 100,000. ASR for cancer among Indian was 97.4 per 100,000 males and 134.7 per 100,000 females.

Cancer occurred at all ages. The most frequent cancers in children (0-14 years old) was leukaemia, while in the group of young adults (15-49 years old), the common cancers in men were nasopharynx, colorectal, lung, brain and leukaemia , and cancers of the breast, cervix, thyroid gland, ovary and colorectal in women. In older age group (50 years old and above), cancers of the colorectal, lung, nasopharynx, prostate and liver were predominant among men, while cancers of the breast, colorectal, cervix, lung and ovary occurred commonly in women.

4.3. SELECTED CANCER SITES

4.3.1. FEMALE BREAST CANCER

In 2006, breast cancer was the most common cancer among female and also the most important cancer among population regardless of sex in Peninsular Malaysia. There were 3525 female breast cancer cases registered in NCR for that year, accounted for 16.5% of all cancer cases registered. The overall ASR was 39.3 per 100,000 population. The age pattern in 2006 showed a peak Age-specific Incidence Rate at the 50-59 age group. The incidence of breast cancer was highest among Chinese where the ASR was 46.4 per 100,000 population followed by Indian and Malay with the ASR of 38.1 per 100,000 population and 30.4 per 100,000 respectively

4.3.2. COLORECTAL CANCER

Colorectal cancer. was the second most common cancer after breast and the first among male and also second among female in Peninsular Malaysia. A total of 2,866 cases were registered with NCR in 2006 and represent 13.2 % of all cases registered. The incidence of colorectal cancer in Peninsular Malaysia increased with age with the overall ASR was 18.4 per 100,000 population. The incidence was slightly higher among males (ASR 21.6 per 100,000) compared to females (ASR 15.4 per 100,000 population). The incidence was highest among Chinese where the ASR was 21.4 per 100,000 population and were lower in Indian and Malay where the ASR was 11.3 per 100,000 and 9.5 per 100,000 respectively.

4.3.3. LUNG CANCER

There were 2,048 2006 cases of lung cancer registered with NCR, comprising 1,445 of males and 603 of females. Lung cancer is the second most common among males and third most common cancer among populations in Peninsular Malaysia.

The ASR for both sexes were 13.3 per 100,000 population and it was more than 2 folds higher among males when compared to females. Chinese were found to have higher incidence rate compared to Malay and Indians.

4.3.4. CERVICAL CANCER

Cancer of the cervix was the third most common cancer among women.. There were a total of 1,074 cases of 2006 registered with NCR and the overall ASR was 12.2 per 100,000 population. Cervical cancer incidence rate increased with age after 30 years and has its peak at ages 60-69 years. Compared among the major races, Chinese women had the highest incidence for cervical cancer followed by Indian and Malay.

4.3.5. NASOPHARYNGEAL CANCER

Nasopharyngeal cancer was the third most common cancer among men. There were a total of 981 of 2006 nasopharyngeal cancer cases registered with NCR and gave the ASR of 8.5 and 2.6 per 100,000 population for males and females respectively. The incidence rate for Nasopharyngeal cancer was highest among Chinese males with the ASR of 15.9 per 100,000 population

4.3.6. LIVER CANCER

In 2006, liver cancer ranked 6th overall, 5th among males and 9th among females in Peninsular Malaysia. There were a total of 793 2006 cases registered with NCR and comprises of 568 males and 225 females. The Age Standardised Incidence Rate calculated was 4,9 per 100,000 for both sexes and for males and females were 7.2 and 2.7 per 100,000 population respectively..

4.3.7. PROSTATE CANCER

There was a total of 735 cases reported and registered with NCR making it the 4th most common cancer among males. The overall ASR was 11.0 per 100,000 population and raised sharply after the age of 60. It was highest among the Indians (13.7 per 100,000) followed by Chinese (11.5 per 100,000) and Malay (9.2 per 100,000).
